

Vertical Sliding Windows

From Mercury Glazing Supplies Ltd

Manufacturers of high-quality specialist British Vertical Sliding Windows

 **Mercury**
GLAZING SUPPLIES LTD

Since 2002, Mercury has been manufacturing and supplying high-quality Vertical Sliding windows to the trade, commercial and new build markets.

As one of the country's largest and most experienced fabricator of the market-leading Spectus Vertical Slider, we offer the expertise and best-in-class credentials when it comes to British Sliding Sash window manufacture.

Whether your project is straightforward or complex, large or small, our technical knowledge, unrivalled experience, and manufacturing credentials deliver the highest quality Vertical Sliding windows every time.

We pride ourselves on working with our customers to support them at every level and offer a wide choice of window options coupled with a reliable nationwide service and competitive price structure.

All our products are backed-up with unrivalled technical support, contract knowledge and industry-standard compliance for peace of mind, whatever the project.

Mercury's Vertical Sliding windows are manufactured from the market-leading Spectus Vertical Sliding system. The Spectus Vertical Slider has been the market leader since it was first launched and is recognised as the heritage window that planners can accept thanks to its authentic features and sympathetic heritage detailing.

Fully Welded Vertical Sliders

Our fully welded Vertical Sliders offer feature sensitive ovolo detailing and a deep bottom rail option delivering the authenticity of a traditional timber box sash window. 128mm front to back dimension ensures the Vertical Slider is suitable for timber box sash replacements.

The window has been attracting a considerable uptake on new build projects and offers a broader appeal with homeowners looking to enhance their homes and maintain the period charm.

Mechanically Jointed Vertical Sliders

Our mechanically jointed Vertical Sliders combines an authentic sash window with superb product performance. Behind the period looks there is a 21st century window with no compromise on the thermal efficiency, security and low maintenance delivering an unbeatable combination for even the most sensitive of refurbishments.

At Mercury, we offer a choice of Vertical Sliding window fabrication options to suit all markets and property styles. Whether your project is heritage-sensitive, traditional or modern, we have you covered.

Product Features at a Glance

- 1 Low maintenance PVC-U with traditional styling.
- 2 Spiral balance mechanisms ensuring smooth operation.
- 3 Tilt open facility available to both sashes for ease of cleaning.
- 4 Optional choice of plant-on or run-through horn details to maintain a traditional appearance.
- 5 Optional astragal Georgian bar available.
- 6 Deep bottom rail option available.
- 7 Choice of cill size options.

Made in Britain

All our Vertical Sliding windows are manufactured in the UK at our state-of-the-art manufacturing facilities in Gloucestershire.

As a company keen to support UK businesses, the Spectus window profiles and the window springs are all made in Britain too. When you purchase a Mercury Vertical Slider you are purchasing a quintessentially British window, that's made in the UK for the UK.

Window designed to achieve a Window Energy Rating of A+ as standard
